Calculations for the second-order zonal harmonic

Pascal Leroy (phl) & Robin Leroy (eggrobin)

Notations:

$$r = \begin{pmatrix} x \\ y \\ z \end{pmatrix}, |j| = 1, r = |r|.$$

For oblateness along the *z*-axis, the potential is

$$\frac{J_2}{2r^5}(3z^2-r^2).$$

For oblateness along **j**,

$$U(\mathbf{r}) = \frac{J_2}{3(\mathbf{r} \cdot \mathbf{j})^2 - r^2}.$$

Differentiating,

$$\frac{\mathrm{d}\,U}{\mathrm{d}\,\boldsymbol{r}} = \frac{J_2}{2} \left(-\frac{5}{r^6} \frac{\mathrm{d}\,\boldsymbol{r}}{\mathrm{d}\,\boldsymbol{r}} (3(\boldsymbol{r} \cdot \boldsymbol{j})^2 - r^2) + \frac{1}{r^5} \left(3\frac{\mathrm{d}\,\boldsymbol{r}}{\mathrm{d}\,\boldsymbol{r}} (\boldsymbol{r} \cdot \boldsymbol{j})^2 - 2r\frac{\mathrm{d}\,\boldsymbol{r}}{\mathrm{d}\,\boldsymbol{r}} \right) \right).$$

Recall that $\frac{\mathrm{d} r}{\mathrm{d} r} = \frac{r}{r}$,

$$\frac{\mathrm{d} U}{\mathrm{d} \mathbf{r}} = \frac{J_2}{2} \left(-\frac{5\mathbf{r}}{r^7} (3(\mathbf{r} \cdot \mathbf{j})^2 - r^2) + \frac{1}{r^5} \left(3\frac{\mathrm{d}}{\mathrm{d} \mathbf{r}} (\mathbf{r} \cdot \mathbf{j})^2 - 2\mathbf{r} \right) \right)$$
$$= \frac{J_2}{2} \left(-\frac{15\mathbf{r}}{r^7} (\mathbf{r} \cdot \mathbf{j})^2 - \frac{3\mathbf{r}}{r^5} + \frac{3}{r^5} 3\frac{\mathrm{d}}{\mathrm{d} \mathbf{r}} (\mathbf{r} \cdot \mathbf{j})^2 \right).$$

With $\frac{\mathrm{d}}{\mathrm{d} r}(r \cdot j)^2 = 2(r \cdot j) \frac{\mathrm{d} (r \cdot j)}{\mathrm{d} r} = 2(r \cdot j)j$,

$$\frac{\mathrm{d}\,U}{\mathrm{d}\,\mathbf{r}} = \frac{J_2}{2} \left(-\frac{15\mathbf{r}}{r^7} (\mathbf{r} \cdot \mathbf{j})^2 - \frac{3\mathbf{r}}{r^5} + \frac{6\mathbf{j}}{r^5} (\mathbf{r} \cdot \mathbf{j}) \right)$$
$$= \frac{3J_2}{2r^5} \left(2\mathbf{j} (\mathbf{r} \cdot \mathbf{j}) + \mathbf{r} \left(1 - \frac{5(\mathbf{r} \cdot \mathbf{j})^2}{r^2} \right) \right).$$

Implementation:

```
// If j is a unit vector along the axis of rotation, and r is the separation
// between the bodies, the acceleration computed here is:
//
//
     -(J2 / |r|^5) (3 j (r.j) + r (3 - 15 (r.j)^2 / |r|^2) / 2)
//
// Where |{\tt r}| is the norm of r and r.j is the inner product.
template<typename InertialFrame>
